

## ALEASOFT AT GENERA 2019: THE NEW REALITY OF FINANCING PHOTOVOLTAIC PROJECTS

**AleaSoft, February 13, 2019. From February 26 to March 1, GENERA 2019 event will be held in Madrid, with the participation of AleaSoft in a stand and in the technical conference on financing photovoltaic projects.**

At **GENERA 2019, Alea Business Software, S.L. (AleaSoft Energy Forecasting)**, the leading company in forecasting energy prices, will share a stand with the **Spanish Photovoltaic Union (UNEF)**, together with other companies in the electricity sector such as **Praxia Energy, ECOOO, NEXUS ENERGIA, RECOM Power, Sma Ibérica Tecnología Solar, ELECSOL SOLAR, HOLALUZ, Factor Energía** and **JAB**.

On the last day of the event, on March 1, Antonio Delgado Rigal, CEO of **AleaSoft**, will participate in the panel on "**Financing of photovoltaic projects**" organized by UNEF. This technical conference is mainly aimed at banks, investment funds and all types of companies related to the planning, financing, construction and operation of new photovoltaic plants and renewable energy power plants in general.

The presentation by Antonio Delgado Rigal, "**The price curve in the new reality of photovoltaic solar energy projects**", will show the challenges that the electricity market faces due to the photovoltaic and renewable revolution that has already begun to achieve the European environmental goals for 2030. The presentation will also show **AleaSoft's** long-term price forecasting methodology, developed over 20 years of experience as a leading provider of products and services for price forecasting in different scenarios and horizons.

For the financing of the new photovoltaic projects, **PPAs** are an element that has become indispensable. The long-term power purchase agreements are the guarantee of income for the developer during the amortization of the project and it opens the possibility of obtaining bank financing. The PPAs are also an opportunity for the offtaker, which ensures its supply of renewable energy for the duration of the contract. Long-term forecasts are a key tool in the analysis, negotiation and implementation of a PPA in order to evaluate the risks associated with a certain price.

Any interest in short, medium or long-term price forecasting for any European market, contact through [info@aleasoft.com](mailto:info@aleasoft.com).
